

L8: Overlapping Communities and CFinder Algorithm

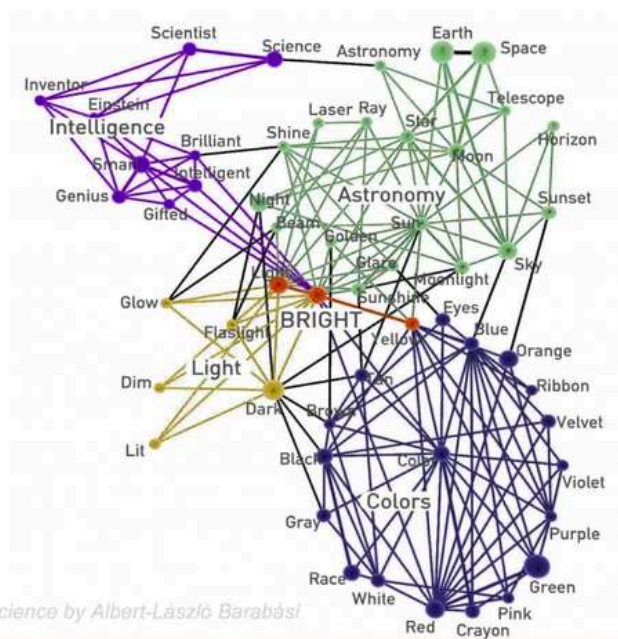

Figure 9.21 from *Network Science* by Albert-László Barabási

Overlapping Communities

0:00 / 1:39

Overlapping Communities

2 videos

Overlapping Communities

1:39

CFinder Algorithm

3:23

Erratum:

1. The first video has a typo at 1:18 → Intelligence community marked as Light and Light community marked as Intelligence.
2. The second video has a typo at 2:07 → bottom right figure denoted by “b” instead of “d”.

Food for Thought

Suppose we run CFinder on the network of part-a with $k=4$? Which communities would the algorithm detect? Would every node belong to one and only one community?
