

L8: Application of Link Clustering Algorithm

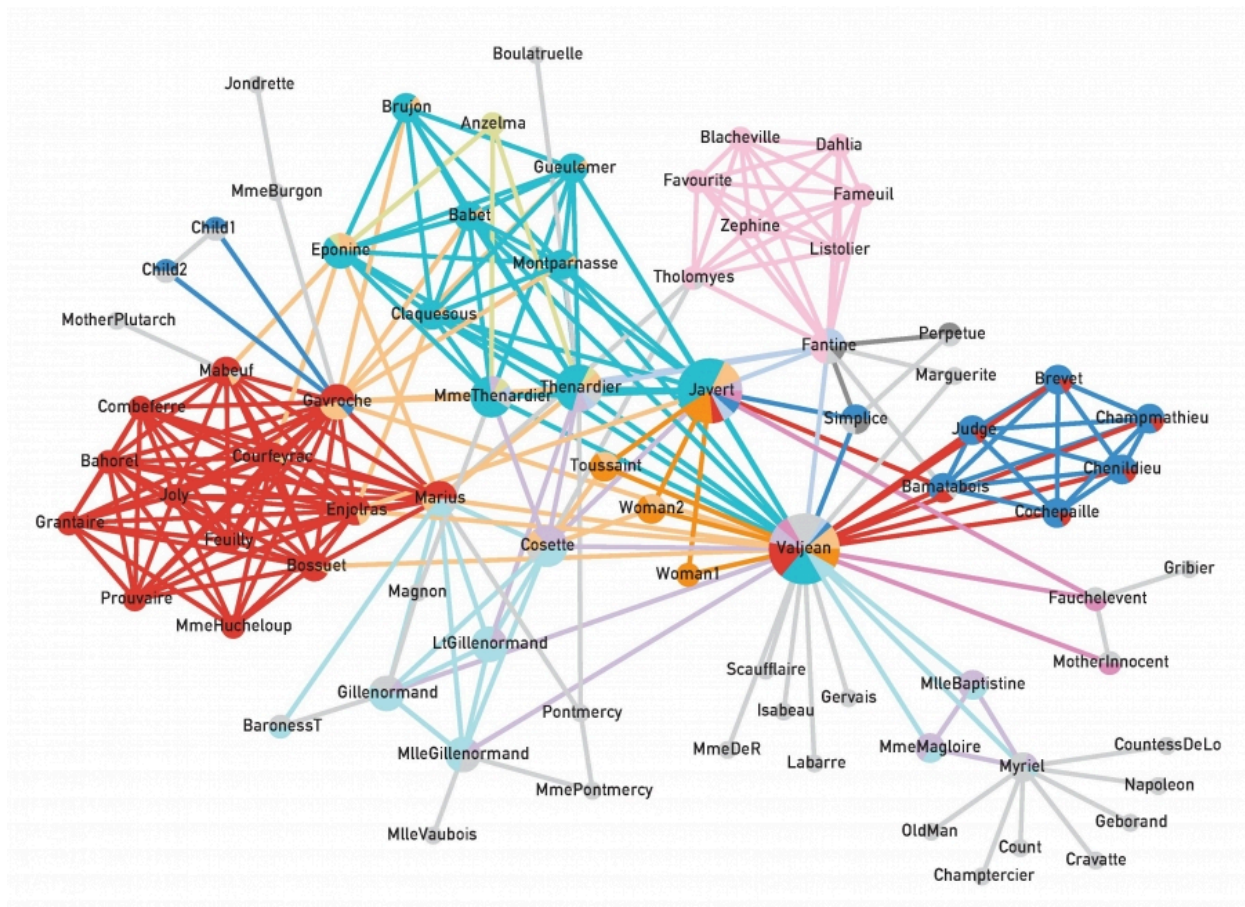

Figure 9.24 from *Network Science* by Albert-László Barabási

The visualization shows an application of the previous algorithm on the network that represents the pairwise interactions between the characters in Victor Hugo's novel "*Les Misérables*".

Nodes that belong to more than one community are shown as pie-charts, providing us with additional information about their degree of participation in each community.

The main character, Jean Valjean, participates in almost all communities, as we would expect.
